SMART
TOUCH

Closing the gap between humans and machines

AVAILABLE ON FORTE CONVERTING LINES

Bringing smart features to your operation

We developed the SmartTOUCH HMI with operators in mind. Following high-performance design principles, users will experience a clean and modern design with enhanced help features. The new smart analytic features are aimed at providing customer insights to improve OEE. It works much like today's mobile devices with swipe functionality, enabling a short learning curve and improved productivity levels.

Here are just a few of the features we know converters will appreciate:

- Simplified controls and navigation
- Easy-to-understand graphics
- Robust help functions with supporting video
- Simple recipe management
- RFID capabilities
- Production data storage
- Change logs

Our SmartTOUCH HMI delivers Industry 4.0 tools to your operation that will transform data to action. Based on a distributed architecture, it is mobile-ready and can be purchased with an option for a tablet that enables remote operation and troubleshooting. With optional IoT connectivity, our latest HMI can also include cloud-based dashboards that will provide insights to ramp up your production levels.
